

Versachip

COMPLEX TECHNOLOGY. SIMPLIFIED.

TURNKEY PRODUCTION

ADVANCING YOUR IDEA THROUGH PROOF OF CONCEPT, DESIGN, PROTOTYPE, TO TURNKEY PRODUCTION.

Versachip excels at FPGA design, SoC, embedded systems development, schematic entry, and layout with the added benefit of providing experienced turnkey production services at transparent, competitive pricing.

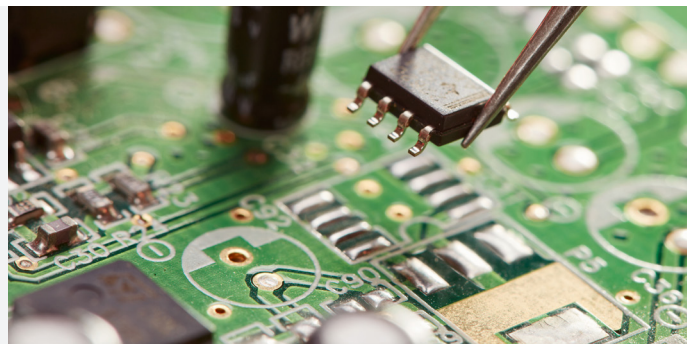

TURNKEY PRODUCTION

Versachip has long-standing relationships with domestic facilities, whose manufacturing capabilities include the fabrication and assembly of printed circuit boards (PCB's) with highly precise and standardized manufacturing technologies.

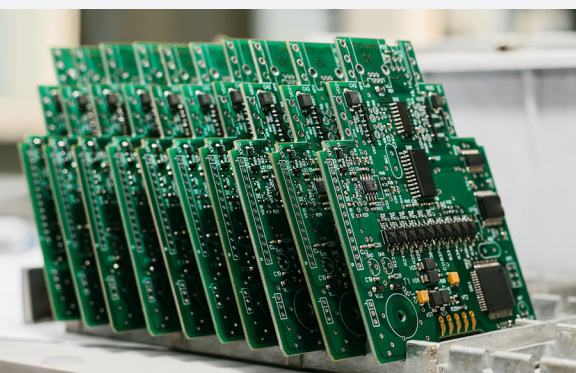

Our turnkey production value add allows:

- Quick Turn Production
- Small Prototype Runs
- Medium & High-Volume Production Runs
- Special customized final test setup and equipment

Versachip's turnkey production contract options:

- The client owns the intellectual property
- Versachip provides application-specific testing in our facilities, more in-depth than what is typically available in many manufacturing facilities
- Versachip provides flexible production contracts - from first article to continued production - based entirely upon your needs

Additionally, Versachip provides:

- DFM review and close relationship with assembly facility to achieve maximum yield
- Strict QC including verification, packing, and serializing
- Add-on final assembly services, such as cabling and enclosure housing to final PCB boards
- Transparent cost-plus billing and comprehensive project management

EXPERTISE

Much of our work has been in the industrial and video-related applications, managing the full design cycle from schematic to production. Applications and industries include:

- Video path design from imager to display
- Test equipment with data converters and various interface protocols
- Audio, video and broadcast systems
- Industrial, scientific and medical applications
- Aerospace and defense industries
